

Dear ALIBAVA user,

You can find in this sheet useful information about the links where you will be able to download the documentation and software needed for the ALIBAVA system.

We have prepared a twiki web page where you can find the software for the system and some documentation. Currently, there is preliminary documentation that will be updated, so please check this web page frequently. The link for this page is the following one.

<https://twiki.ific.uv.es/twiki/bin/view/Atlas/ALiBaVa>

We have also prepared an “ALIBAVA-general” mailing list in order to organize the feedback from users so that all ALIBAVA users can share the same info. You can find more information about this mailing list in the following link.

<https://lists.sourceforge.net/lists/listinfo/alibava-general>

You should subscribe to this mailing list and use it for demanding information and giving as well as receiving feedback about the system.

We also are planning to create a repository with the last versions of software, root macros for processing the data obtained with the ALIBAVA system and documentation about the system. We will inform about this issue as soon as it has been created.
